Message from Commissioner Richard Burke

Effective analysis and discussion require common access to factual information.

The Statistical Office of the European Communities — Eurostat — has a vital institutional role to play in providing data to serve the decision-making process of the European Community. By its success in performing this role, Eurostat through its publications and data services has available material which deserves not just to be more widely known but also to be put to use by educators, researchers, businesses, companies and interest groups throughout the Community.

As the Member of the European Commission with special responsibility for the Statistical Office, I have been particularly anxious to create this necessary wider awareness of what Eurostat offers. The opportunity provided by the focus of popular attention in the Community around the European Parliament elections seems to me to provide an ideal occasion to try a more direct approach towards interesting individuals in the information value of comparative statistics.

I welcome this simple introductory presentation of statistics relating to the European Community, its Member States, and major trading partners, and would particularly urge readers to note the information about Eurostat and access to its publications and other services.

Statistics are not always as easily read or as graphically presented. What is offered here is intended to provide the minimum necessary to an initial appreciation of the Community. I hope it will prove a useful start for you.

May 1984

ILLUSTRATIONS

The Community and other countries

EUROSTAT:

The Statistical Office
of the European Communities

The role of Eurostat

Eurostat (The Statistical Office of the European Communities) is one of the Directorates-General of the Commission of the European Communities.

Its primary function is to collect, harmonize and disseminate statistical information on the Member States of the EEC and the main countries with which the Community maintains relations (main economic partners, developing countries, etc.).

Statistics are generally collected through the national statistical institutes, government departments, trade associations or international associations. In certain cases, Eurostat collects data directly through its own surveys.

One of Eurostat's important functions is the harmonization of statistics with the aim of obtaining comparable data for the various countries. In an international grouping engaged in a process of integration it is essential that economic indicators for the various countries should be comparable and that each country should be able to evaluate its situation in relation to the entire group in terms of both absolute levels and trends. Systems harmonized at Community level (methodologies, definitions, nomenclatures) are developed by 20 or so working parties comprising representatives of Eurostat and the national statistical institutes, which meet at intervals. In the course of time, the national statistical systems have thus been more closely aligned and most of the data supplied by the Member States are now comparable.

In addition to this *ex ante* harmonization by alignment of the methods of compilation in the various countries, Eurostat harmonizes certain data *ex post* when the reasons for discrepancies between countries have been identified.

Eurostat disseminates statistical information by means of publications and microfiche and in recent years by supplying data on magnetic media: tapes and on-line access to certain of its data banks.

Eurostat publications

Eurostat has a large publications programme and each year publishes some 100 different titles, making an overall total of several hundred thousand printed volumes. Many of these are supplied free of charge to Community institutions and departments and to Member States, public institutions, the press, bodies with a special interest and libraries.

Three key publications are given wide publicity. These are *Eurostatistics*, a monthly publication with a large number of short-term economic indicators, *Eurostat Review*, an annual publication with yearly figures for a 10-year period covering all main fields of statistics for the 10 member countries, Spain, Portugal, and also the USA and Japan, and the handy-size *Basic statistics*, a small yearbook with the most important figures.

The subjects covered by Eurostat publications are listed on a separate sheet.

In addition to formal publications, Eurostat issues statistics as information notices and in internal publications, not designed for sale but available to the public while stocks last.

The production and sale of the publications of all the European institutions is organized by the Office for Official Publications of the European Communities, which has around 20 sales offices in various countries. Statistical Office publications account for about a quarter of all Commission publications, excluding the Official Journal.

The Cronos data bank

Cronos is the largest of Eurostat's data banks. It contains most of the time series produced and published by Eurostat, which currently amount to over one million series (including 600 000 public series).

Cronos contains general, industrial, agricultural, social, national accounts and external trade statistics.

Cronos was designed from the outset for on-line access, priority being given to Commission departments. Today, more than 250 terminals installed in the Commission's offices in Brussels and Luxembourg give direct access to Cronos. From these terminals it is possible to call up the series, to have them displayed, to construct tables and charts and to carry out standard operations on the series (adjustment for seasonal variations, growth rates, etc.) by means of an easily used interrogation language.

The Comext data base

External trade is one of the cornerstones of the European Community as can be seen from the large number of trade agreements it has signed with non-member countries and the ever-increasing share of foreign trade in the economies of the Member States. The Community being the world's major trading power, its economy is strongly influenced by movements in its trade, hence the need for a regular supply of information.

From information supplied by national statistical institutes, Eurostat prepares statistics on the Community's external trade and on trade between the Member States.

These statistics are used for a variety of purposes including trade negotiations, short-term economic monitoring, surveillance of trade flows, balance of payments, market analysis, supply balance sheets, national accounts, budgetary control, etc.

On-line access to Cronos and Comext

To ensure the best possible access, Eurostat uses service bureaux which have signed an agreement with the Commission. The service suppliers have computers connected to networks through which the statistics prepared by Eurostat are made available to users who have a terminal connected to the network.

At present the Cronos data base is available through the following service suppliers:

- Compagnie Internationale
des Services en Informatique (CISI)

General information

The publications of the Statistical Office of the European Communities (Eurostat) are grouped according to 'themes' and 'sub-themes', of which the reader will find a classification overleaf.

Eurostat News provides the public with a regular flow of information on the progress of the Eurostat publications programme. The presentation is such that it is clear which publications have been **published** in the course of the last quarter and which are about **to be published** and will thus be available in the near future. There follows a list of 'periodicals', indicating their frequency of publication (monthly, quarterly, half-yearly).

The information provided on each publication is as follows: 'theme' to which the work belongs, title of volume, international classification number (ISBN or ISSN), languages in which available, format, number of pages, price and brief summary of content. For practical reasons, the price is given in only one currency, the BFR (Belgian franc) which is the legal tender in the country of publication (the Grand Duchy of Luxembourg). The price thus indicated applies when orders are placed directly with the **Office for Official Publications of the European Communities** (L-2985 Luxembourg, 5 rue du Commerce — postal cheque account (CCP)

19190-81 — bank current account BIL 8-109/6003/300) and serves as a rough guide to the prices in the various national currencies in the event of purchase from the sales offices which are listed on the third page of the cover. The languages in which the publications are available are shown by the following abbreviations: M = multilingual, i.e. in all the official languages of the European Communities, DA = Danish, DE = German, GR = Greek, EN = English, FR = French, IT = Italian NL = Dutch.

Users who wish to order publications directly from the Publications Office (or to take out subscriptions) will find an order form on the last page of *Eurostat News*. It need only be detached, legibly completed and sent to the address indicated.

Further information may be obtained from the staff responsible for *Eurostat News* (at the address given on the first page of this issue) or from Division A 3 'Publications' (Jean Monnet Building, L-2920 Luxembourg — Tel. 43 01-20 38 — Telex Comeur Lu 3423).

Officials of the Commission of the European Communities who are employed in Brussels should apply to the Eurostat 'Data Shop' (UPB Building, 120 Rue de la Loi, B-1049 Brussels — Office 4/11, Tel. 5 15 04).
